

Mobile Testing Assessment

This paper evaluates core concepts in mobile application testing, focusing on testing environments and device emulation.

SECTION B: Short Answer Questions

Q1. Explain the key difference between a mobile emulator and a mobile simulator, and describe why testing on real devices is still necessary. (5 Marks)

INSTRUCTOR ONLY - ANSWER KEY & RUBRIC

Short Questions - Grading Guide

Q1. Ideal Answer:

Emulators mimic both hardware and software behavior, while simulators only mimic software environments. Real devices are necessary to test actual hardware performance, battery consumption, and real-world network interruptions.

Rubric:

Award 2 marks for distinguishing emulators from simulators, and 3 marks for explaining the necessity of real device testing with examples.
